

BSF4ooRexx

The Bean Scripting Framework for ooRexx

- External Rexx function package
 - Allows to interact with the Java runtime environment (JRE)
 - Exploit functionality of Java classes
 - Exploit functionality of Java objects
 - ooRexx 4.1.0 and later
 - Package "[BSF.CLS](#)"
 - Camouflages Java as ooRexx
 - Supplies class BSF and public routines
- "Everything that is available in Java becomes directly available to ooRexx!"
 - Java: "write once, run everywhere!"
 - Windows, MacOS, Linux, ...

BSF4ooRexx: An Example

```
dim=.bsf~new("java.awt.Dimension", 100, 200)
say dim~toString

::requires BSF.CLS      -- get Java support
```

Output:

```
java.awt.Dimension[width=100,height=200]
```

Downloading Java (Usually Free and Open-source)

- JRE versus JDK
 - JRE: "Java **R**untime **E**nvironment", no compiler
 - JDK: "Java **D**evelopment **K**it", compiler & tools
- Java/JDK 8 LTS ("long term support")
 - Released 2014, supported until 2026, 2030 (Azul)
- Java/JDK 17 LTS ("long term support", "modular Java")
 - Released 2021, supported at least until 2029
- Suggestion: download JDK with JavaFX support, e.g.
 - **Full JDK:** <<https://bell-sw.com/pages/downloads/>> (2022-05-18)
 - **JDK FX:** <<https://www.azul.com/downloads/>> (2022-05-18)

Things to Know About Java, 1

- Strictly typed language
 - Primitive types
 - boolean, byte, char, short, int, long, float, double
 - Object-oriented types
 - Any Java class, e.g.
 - java.awt.Dimension, java.lang.String, java.lang.System, ...
 - Wrapper classes for primitive types
 - java.lang.Boolean, java.lang.Byte, java.lang.Character, java.lang.Short, java.lang.Integer, java.lang.Long, java.lang.Float, java.lang.Double
 - "Boxing": wraps up a primitive value into a wrapper object
 - "Unboxing": retrieves a primitive value from its wrapper object

Things to Know About Java, 2

- Case sensitive
 - Upper- and lowercase significant!
- Classes organized in packages
 - Package names may be compound
 - E.g. "java.lang"
 - Fully "qualified class name" includes package name
 - e.g. "java.lang.String"
 - "Unqualified class name"
 - e.g. "String"

Things to Know About Java, 3

- A Java class may consist of
 - Fields (comparable to ooREXX attributes) and
 - Methods (comparable to ooREXX methods)
- Fields and methods
 - Static fields and static methods
 - Sometimes dubbed "class fields" and "class methods"
 - Available to the class object and its instances
 - Otherwise "instance methods"
 - Only available to instances of a Java class

Things to Know About Java, 4

- A Java class, its fields and methods may be
 - "public"
 - These can be accessed by the "world" (everyone)
 - "private"
 - Only accessible within the Java class
 - "protected"
 - Only accessible within Java classes of the same package and subclasses
 - None of the above modifiers given ("package private")
 - Only accessible within Java classes of the same package, but to noone else

Things to Know About Java, 5

- Excellent documentation ("JavaDoc")
 - Extensive set of interlinked HTML documents
 - Created right from the comments in Java sources
 - Can be studied on the Internet, search e.g. with

```
javadoc 8 java.awt.Dimension  
javadoc 8 Dimension  
javadoc 17 java.awt.Dimension  
javadoc 17 Dimension
```
- Documentation can be downloaded to local computer, e.g.
 - Java/JDK 8LTS ("long term support"):
 - <<https://www.oracle.com/java/technologies/javase-jdk8-doc-downloads.html>> (2022-05-18)
 - Java/JDK 17LTS ("long term support"):
 - <<https://www.oracle.com/java/technologies/javase-jdk17-doc-downloads.html>> (2022-05-18)

A Javadoc Example (JDK8LTS)

Class XyzType

java.lang.Object
XyzType

```
public class XyzType  
extends java.lang.Object
```

Field Summary

Fields

Modifier and Type	Field and Description
static int	counter

Constructor Summary

Constructors

Constructor and Description
XyzType()
XyzType(java.lang.String initialValue)

Method Summary

All Methods Instance Methods Concrete Methods

Modifier and Type	Method and Description
java.lang.String	getInfo()
void	setInfo(java.lang.String aValue)

BSF.CLS: Camouflages Java as ooRexx

- ooRexx class "**BSF**"
 - Allows to create Java objects
 - Needs at least fully qualified Java class name
- Invoking Java methods
 - Just send the name of the method to the Java object
 - Supply the arguments as documented, if any
 - Type conversions between ooRexx and Java are done automatically by BSF4ooRexx, if necessary
 - Return values are automatically converted by BSF4ooRexx, if necessary

BSF4ooRexx: Java Class "XyzType", 1

```
o=.BSF~new("XyzType")
say "o~getInfo:" o~getInfo
o~setInfo("Hello, from ooRexx...")
say "o~getInfo:" o~getInfo
::requires BSF.CLS -- get Java support
```

Output without “XyzType.class” available:

```
Error 40.900: BSF4ooRexx/routine/BSF(), error 3: Java exception occurred:
[org.apache.bsf.BSFException: BSF4ooRexx subfunction "new": while attempting to load class
'XyzType', threw: [org.apache.bsf.BSFException: BSF4ooRexx subfunction "new": while attempting to
load class 'XyzType', threw exception: [java.lang.ClassNotFoundException: XyzType]]].]
```

Output with “XyzType.class” available:

```
o~getInfo: The NIL object
o~getInfo: Hello, from ooRexx...
```

XyzType.java

- “XyzType.java” (Source Code)

```
/* This is the most important class of all!
 * Even if one does not believe this, this is so! ;)
 * &Ouml;sterreich, Wien.
 */

public class XyzType // example class for demonstrating BSF4Rexx
{
    // constructors of this class (same name as class!)
    public XyzType () {           // constructor without arguments
        counter=counter+1;       // increase counter
    }

    public XyzType (String initialValue) { // constructor with argument
        this();                  // invoke constructor above (no argument)
        info=initialValue;        // save initial value
    }

    // keyword "static": class fields (attributes) and class methods
    static public int counter=0;      // field: will count # of instances

    // instance fields (attributes) and instance methods
    private String info = null; // field: no initial value per default

    public String getInfo () { // accessor (getter) method (function)
        return info;           // return whatever "info" points to
    }

    public void setInfo (String aValue) { // setter method (function)
        info=aValue;             // save received value with "info"
    }
}
```

Compile Java source file with the Java compiler "javac" into "byte code":

javac XyzType.java

creates: **XyzType.class**

Create Java documentation with the utility "javadoc", place resulting files into the directory named **docs**:

javadoc -d docs XyzType.java

load documentation from: **docs\index.html**

BSF.CLS: Camouflages Java as ooRexx

- ooRexx class "**BSF**"
 - Allows to create Java objects
 - Needs at least fully qualified Java class name
- Possible arguments for creating Java objects
 - Can be found by studying the "Constructor" section in the Javadocs
 - Supply the arguments as documented after the fully qualified Java class name argument
 - Type conversions between ooRexx and Java are done automatically by BSF4ooRexx, if necessary

BSF4ooRexx: Java Class "XyzType", 2

```
o=.BSF~new("XyzType", "This value was supplied at Java object creation.")

say "o~getInfo:" o~getInfo

o~setInfo("Hello, from ooRexx...")
say "o~getInfo:" o~getInfo

::requires BSF.CLS -- get Java support
```

Output:

```
o~getInfo: This value was supplied at Java object creation.
o~getInfo: Hello, from ooRexx...
```

BSF.CLS: Camouflages Java as ooRexx

- Allows to import any Java class
 - **bsf.import(JavaClassName)**
 - Java class name
 - Use of the exact case is mandatory !
 - Java class name must be fully qualified !
- Imported Java class can be treated as if it were an ooRexx class
 - Allows to use the ooRexx "**new**"-method to create instances of the imported Java class
 - Possible arguments for creating Java objects can be found by studying the "Constructor" section in the Javadocs

BSF4ooRexx: Java Class "XyzType", 3

```
cls=BSF.import("XyzType")
o=cls~new("This value was supplied at Java object creation.")

say "o~getInfo:" o~getInfo

o~setInfo("Hello, from ooRexx...")
say "o~getInfo:" o~getInfo

::requires BSF.CLS -- get Java support
```

Output:

```
o~getInfo: This value was supplied at Java object creation.
o~getInfo: Hello, from ooRexx...
```

BSF.CLS: Camouflages Java as ooRexx

- Accessing, setting Java fields
 - ooRexx treats public fields as ooRexx attributes
 - Java "get" and "set" pattern methods for Java fields honored by BSF4ooRexx
 - Just use the field name following "get" and "set" only
 - Static fields can be accessed via the
 - Java class object or
 - any of its instances

BSF4ooRexx: Java Class "XyzType", 4

```
clz=BSF.import("XyzType")
say "clz~counter:" clz~counter

o=clz~new("This value was supplied at Java object creation.")
say "clz~counter:" clz~counter
say "o ~counter:" o ~counter

say "o~getInfo:" o~getInfo

o~setInfo("Hello, from ooRexx...")
say "o~getInfo:" o~getInfo

clz~~new~~new~~new
say "clz~counter:" clz~counter "/" "o~counter:" o ~counter

::requires BSF.CLS -- get Java support
```

Output:

```
clz~counter: 0
clz~counter: 1
o ~counter: 1
o~getInfo: This value was supplied at Java object creation.
o~getInfo: Hello, from ooRexx...
clz~counter: 4 / o~counter: 4
```

BSF4ooRexx: Java Class "XyzType", 5

```
clz=BSF.import("XyzType")
say "clz~counter:" clz~counter

o=clz~new("This value was supplied at Java object creation.")
say "clz~counter:" clz~counter
say "o ~counter:" o ~counter

say "o~getInfo:" o~getInfo

o~info="Hello, from ooRexx..."
say "o~info:" o~info

clz~~new~~new~~new
say "clz~counter:" clz~counter "/" "o~counter:" o ~counter

::requires BSF.CLS -- get Java support
```

Output:

```
clz~counter: 0
clz~counter: 1
o ~counter: 1
o~getInfo: This value was supplied at Java object creation.
o~info: Hello, from ooRexx...
clz~counter: 4 / o~counter: 4
```

- About respecting case
 - Case of fully qualified Java class name
 - Always significant!
- Case of fields and method names insignificant
 - Eases coding enormously

BSF4ooRexx: Java Class "XyzType", 6

```
clz=BSF.import("XyzType")
say "clz~COUNTER:" clz~COUNTER

o=clz~new("This value was supplied at Java object creation.")
say "clz~CounteR:" clz~CounteR
say "o ~cOUNTEr:" o ~cOUNTEr

say "o~getinfo:" o~getinfo

o~info="Hello, from ooRexx..."
say "o~iNfO:" o~iNfO

clz~~new~~new~~new
say "clz~CounteR:" clz~CounteR "/" "o~cOUNTEr:" o ~cOUNTEr

::requires BSF.CLS -- get Java support
```

Output:

```
clz~COUNTER: 0
clz~CounteR: 1
o ~cOUNTEr: 1
o~getinfo: This value was supplied at Java object creation.
o~iNfO: Hello, from ooRexx...
clz~CounteR: 4 / o~cOUNTEr: 4
```

BSF.CLS: Creating Java Arrays, 1

- Java arrays
 - Strictly typed
 - Fixed capacity
 - Indices start with value "**0**"
- Public routine "**bsf.createJavaArray(...)**"
 - Arguments
 - First argument gives the Java type
 - Fully qualified Java class name or Java class object
 - Each further argument is an integer value, denoting the maximum elements in that dimension

BSF.CLS: Creating Java Arrays, 2

- Public routine "**bsf.createJavaArray(...)**"
 - Resulting Java array can be used as if it was an ooRexx array object!
 - Indices start at "**1**" as with ooRexx arrays!
 - Possesses the fundamental *ooRexx array methods* like "**AT**", "**[]**", "**PUT**", "**[]=**", "**supplier**", and "**makeArray**"
 - Can be therefore used in ooRexx "**DO ... OVER**" and "**DO WITH ... OVER**" loops

BSF.CLS: Creating a Java Array

```
-- create a two-dimensional (5x10) Java Array of type String
arr=.bsf~bsf.createJavaArray("java.lang.String", 5, 10)

arr[1,1] = "First Element in Java array."           -- place an element
arr~put("Last Element in Java array.", 5, 10) -- place another one

do o over arr      -- loop over elements in array (makearray)
  say o
end
say

do with index i item o over arr -- loop over elements in array (supplier)
  say i ":" o
end

::requires BSF.CLS -- loads Java support
```

Output:

```
First Element in Java array.
Last Element in Java array.

1,1: First Element in Java array.
5,10: Last Element in Java array.
```

BSF4ooRexx: BSFCreateRexxProxy, 1

- RexxProxy
 - A Java object that proxies an ooRexx object
 - Any method invocations on the Java object will be forwarded as an ooRexx message to the proxied ooRexx object
 - All arguments supplied to the Java method are forwarded in the same sequence with the ooRexx message
 - BSF4ooRexx always appends an additional argument, "**slotDir**" (an ooRexx directory object) to the ooRexx message, which will contain information about the Java method invocation

BSF4ooRexx: BSFCreateRexxProxy, 2

- RexxProxy
 - **BSFCreateRexxProxy(rexxObj [, userData])**
 - Creates and returns a Java object that proxies "rexxObj"
 - If "userData" (any Rexx object) supplied, then it will be added to the "slotDir" directory
 - **BSFCreateRexxProxy(rexxObj [, [userData], jiClz[, ...]])**
 - "jiClz" can be one or more Java interface classes the returned RexxProxy can be used for!
 - **BSFCreateRexxProxy(rexxObj [, [userData], jaClz[, arg[,...]]])**
 - "jaClz" is an abstract Java class, "arg" can be one or more arguments for creating an instance of it

BSF4ooRexx: RexxProxy, 1

```
rexxObj=.myClass~new
rexxObj~hello
say "---"
rp=BSFCreateRexxProxy(rexxObj)      -- create a Java RexxProxy object
rp~sendMessage0("hello")           -- send via Java

::requires BSF.CLS    -- get Java support

::class myClass
::method hello
  say "hello from" pp(self)
```

Output:

```
hello from [a MYCLASS]
---
hello from [a MYCLASS]
```

BSF4ooRexx: RexxProxy, 2

```
rexxObj=.myClass~new
rexxObj~hello
say ---
userData="This is some REXX string."      -- sent only if invoked via Java
rp=BSFCreateRexxProxy(rexxObj,userData)    -- create a Java RexxProxy object
rp~sendMessage0("hello")                  -- send via Java

::requires BSF.CLS   -- get Java support

::class myClass
::method hello
  use arg slotDir   -- available only, if called from Java
  if slotDir~isA(.directory) then
    say "hello from" pp(self) "userData:" pp(slotDir~userData)
  else
    say "hello from" pp(self)
```

Output:

```
hello from [a MYCLASS]
---
hello from [a MYCLASS] userData: [This is some REXX string.]
```

BSF4ooRexx: Roundup, 1/2

- External Rexx function package
 - BSF4ooRexx version [641](#) needs at least Java [6](#) or later, and ooRexx [4.1](#) or later
 - Allows interacting with Java classes and objects
- "**BSF.CLS**"
 - Camouflages Java as ooRexx
 - Allows easy creation of Java objects
 - Java class name *must be fully qualified and in exact case*
 - Allows sending ooRexx messages to Java objects
 - No strict casing, no strict typing

BSF4ooRexx: Roundup, 2/2

- BSFCreateRexxProxy()
 - Wraps up an ooRexx object in a Java object
 - Allows to send messages to ooRexx from Java
 - Very powerful if used with Java interface classes or Java abstract classes
 - Java abstract methods can be implemented in ooRexx!

Addendum

- Please note
 - The following slides explain a built-in mechanism to BSF4ooRexx that you will probably never need to use
 - However, should you ever run into a situation where case or type becomes important for BSF4ooRexx to work, then the following slides will help you solve such a challenge easily

Addendum: Extremely Rare Cases, 1

- Possible (extremely!) rare case problem
 - Possible that a Java class has different fields and methods with the same name, but with different cases
 - For Java these are different fields and methods
 - BSF4ooRexx does not distinguish by default
- Possible (extremely!) rare type problem
 - Possible that a Java class has different methods with the same name and type-convertible primitive arguments, but with different behaviour
 - Solution: use the public routine **box("typeIndicator",value)** from the **BSF.CLS** package

Addendum: Extremely Rare Cases, 2

- To solve such rare problems
 - Wrap up primitive types using the public routine
 - `box("typeIndicator",value)`
- "Type indicators" are REXX strings
 - Indicate primitive types must be used
 - "**BO**olean", "**BY**te", "**C**haracter", "**SH**ort", "**I**nteger", "**L**ong", "**F**loat", "**D**ouble"
 - Special type indicators
 - "**S**tring", turn into a Java string
 - "**O**bject", value is a non-primitive value (only used for methods, see next slide)

Addendum: Extremely Rare Cases, 3

- To solve such rare problems the following methods are available for Java objects
 - Field related
 - `bsf.getFieldValueStrict(exactName)`
 - `bsf.setFieldValueStrict(exactName, [typeIndicator,] newValue)`
 - Method related
 - `bsf.invokeStrict(exactMethodName [, typeIndicator, argument...])`
 - "typeIndicator" precedes each argument
 - Constructor related
 - If Java class was imported using `bsf.import(...)`, then
 - in addition to "`new`" the method "`newStrict`" is available, which expects each argument to be preceded by a "typeIndicator"

Addendum: Using "strict" BSF-methods

```
clz=BSF.import("XyzType")
say "clz~counter (strict):" clz~bsf.getFieldValueStrict("counter")

o=clz~newStrict("String", "This value was supplied at Java object creation.")
say "clz~counter (strict):" clz~bsf.getFieldValueStrict("counter")
say "o ~counter (strict):" o ~bsf.getFieldValueStrict("counter")

say "o~getInfo (strict):" o~bsf.invokeStrict("getInfo")

o~bsf.invokeStrict("setInfo", "String", "Hello, from ooRexx...")
say "o~getInfo (strict):" o~bsf.invokeStrict("getInfo")

clz~~newStrict~~new~~newStrict
say "clz~counter (strict):" clz~bsf.getFieldValueStrict("counter")
say "o~counter (strict):" o ~bsf.getFieldValueStrict("counter")

::requires BSF.CLS -- get Java support
```

Output:

```
clz~counter (strict): 0
clz~counter (strict): 1
o ~counter (strict): 1
o~getInfo (strict): This value was supplied at Java object creation.
o~getInfo (strict): Hello, from ooRexx...
clz~counter (strict): 4
o~counter (strict): 4
```
